

Known Limitations Library

Structured limitation log for OEM, Android, MDM, app, market and lifecycle dependencies.

How to use this asset

Use this document during feasibility review, sample validation and batch staging. Record open dependencies rather than hiding them. Conditional items should be resolved, accepted with a visible limitation or excluded from the build spec.

Category	Example Limitation	How It Is Handled
OEM or model	Boot animation, firmware option or accessory fit is model-dependent.	Record selected model, dependency owner and fallback path.
Android or GMS path	AOSP/GMS decision changes app distribution or service behavior.	Link to build spec and app acceptance checks.
MDM and policy	A restriction depends on device-owner mode or MDM support.	Record policy group, tested behavior and unsupported controls.
App and backend	Offline queue, login or update behavior depends on customer app.	Assign to app owner and keep open until sample test passes.
Market, carrier or certification	Target-country certificate, carrier acceptance or importer role is unresolved.	Flag as target-market dependency before production commitment.

Use notes

- Accepted limitations should appear in the build spec.
- Core workflow blockers should not be hidden inside notes.

Public template. Adapt during feasibility review. Not a substitute for signed project terms, certifications or legal agreements.
