Vantora

Sample Acceptance Matrix

Pass/fail matrix for validating a sample Android device before production staging.

How to use this asset

Use this document during feasibility review, sample validation and batch staging. Record open dependencies rather than hiding them. Conditional items should be resolved, accepted with a visible limitation or excluded from the build spec.

Area	Test Item	Expected Evidence	Status Options
App readiness	Install, login, core workflow, update path and offline behavior.	Screened test run with app version, account role and open issues.	Pass / Fail / Conditional / Not applicable.
Policy controls	MDM enrollment, allowlist, kiosk, reset path and remote commands.	Policy group record and tested restriction behavior.	Pass / Fail / Conditional / Not applicable.
Hardware fit	Display, battery, scan/RFID/camera, sensors, accessories and charging.	Pilot checklist with runtime, capture results and accessory fit notes.	Pass / Fail / Conditional / Not applicable.
Network and region	SIM/APN, Wi-Fi, radio band assumptions and target-market documentation.	Connectivity test notes and unresolved certification or carrier items.	Pass / Fail / Conditional / Not applicable.
Batch handoff	Labels, packaging, serial capture, app version and staging group.	Staging record format accepted by customer or partner.	Pass / Fail / Conditional / Not applicable.

Use notes

- A conditional item should name the dependency owner.

- Production should wait until core workflow blockers are resolved or formally excluded.
